30 genera held out from development. Contrasts are simultaneous within each cell only. SS*: corrected SetSketch.
Grey: no measured configuration meets the standard target in any workload. †: some workloads have no feasible configuration.
Candidate membership describes relative loss, not target attainment. Full candidates and feasibility fractions are in CSV.
Targets: J MAE/P95 .02/.05; C .05/.10; relative cardinality .10/.25; NN >= .90; species >= .95; ARI >= .80; validity >= .99.
